

Kinetic Percussion FAQ

Q - Why is my instrument saying "DEMO"?

A - You are incorrectly using the free "player" version of Kontakt. This library, as stated in the requirements, only works in the FULL version of Kontakt

Q - I see small 4KB "duplicate" instrument files. What are these?

A - Some extraction apps will create these. Simply delete or ignore them. Attempting to load them into Kontakt will result with errors.

Q - I cannot fully extract the library.

A - Please see the installation guide at <https://kineticpercussionplace.s3.amazonaws.com/installation-rar-files.pdf>

Q - When I open the "customer full unlock Kinetic Percussion" file, it says that it has already been used.

A - Disregard that file. In fact, you can delete it altogether

Q - I need to re-download my library, but the download no longer works.

A - Download links expire after 1 month, so please back up your library after installation.
